Print Ready
File Requirements

Artwork Size: Sized to Exact Dimensions (within a 14in wide x 16in tall area)

Color Mode: 8bit RGB

Resolution: 300dpi

File Type: PNG with Transparent Background (if artwork is sent in without a transparent background it will be printed as is)

Common File Problems
Please double check artwork if unsure

Backgrounds: Files should be sent in with no background (transparent). A white background behind the artwork will print white on the shirt.

Transparency: Files with artwork that fade to garment color cannot process with the integration software and should be avoided if possible. Any art that does have transparencies or fades cannot be guaranteed.

Hidden Artifacts: Art can sometimes appear fully transparent but not be. An easy way to check is to place a black background layer behind the artwork and check for anything that should not be there. Art that is sent in with these hidden areas cannot be caught by the software and will be printed.

Artwork Sizing: Some customer imaging software will take a high resolution file, say 300DPI, and scale it to a 72DPI file with greater width and height. When it does this, it changes its dimensions well beyond the range of our allowed 14in wide and 16in tall area. If files come across larger than the allowed area they will be automatically resized to a 12x12in area.

File Type cont.: Files must be a PNG , not just a re-named file ending in PNG. JPGs and TIFFs will not process.

Any questions on artwork please contact: Art@PrintReadyApp.com
